~~For use in the development of a shock wave rocket motor~~
(Approved for release 1990 by NSA, 100-100)

Phenomena: *Shock waves, *Chemical reactions, *Nuclear
propulsion, *Water, *Acoustic waves, *Explosives, *Shock
waves, *Reactions

When a shock wave is generated in a liquid, the pressure
increases and the temperature of the liquid rises. In
a liquid, the shock wave is a compression wave. The
pressure of the liquid increases rapidly, but water
is incompressible. The temperature of the liquid may be
increased by a factor of 1000 in a few microseconds.
